

SERIES SMB “SPIN-AWAY” MAILBOX POST

THE “SPIN-AWAY” POST ADVANTAGES

DURABLE

The SMB “spin-away” mailbox post is fabricated out of extruded aluminum. The powder coated surface provides a hard thick finish far more durable than conventional paint or stain coatings. The “spin-away” design feature allows for the post and mailbox to absorb the force of plowed snow and other weather elements without bending, breaking or disfiguring the mailbox or post. The durable metal mounting brackets guarantee that the mailbox will remain securely fastened to the post. The combination of these mounting brackets and the “spin-away” feature protects your mailbox and post from damage.

SIMPLE TO INSTALL

Our “spin-away” post requires no special tools for installation. There are two post mounting options, either a simple poured concrete footing or a pound-in mounting pivot. The mailbox post attaches to the permanent mounting pivot with two set screws.

MAINTENANCE FREE

The powder coated mailbox post does not require painting. In the unlikely event of small paint chipping, the aluminum post will not rust.

GREEN

Unlike vinyl, plastic and composite post systems, the SMB “spin-away” mailbox post contains no petroleum byproducts. The SMB “spin-away” post is manufactured from recyclable aluminum. Wood is not used. The powder coated finish uses a coating process that allows recycling of any overspray, eliminating hazardous waste found in other conventional coating processes.

VALUE

Save time and money by installing the SMB “spin-away” mailbox post – a post that won’t need to be replaced. Do away with the unsightly “snow shield” and show off your mailbox on our stylish and durable mailbox post.
